

## Revolutionizing Edge Computing: The Europa Device - Compact, Powerful, and Reliable

Maris-Tech is a leading B2B provider of intelligent video transmission technology, founded by veterans of the Israel technology sector with extensive electrical engineering and imaging experience. Our products are designed to meet the growing demands of commercial and tactical applications, delivering high-performance, compact, low power and low latency solutions to companies worldwide, including leading electro-optical payload, RF datalink and unmanned platform manufacturers as well as defense, HLS, and communication companies.

## Art of Logic and Maris-Tech Seal Partnership Deal

Art of Logic, a leading provider of cutting-edge technology solutions, is excited to announce partnership with Maris Technology. This strategic partnership will focus on the development and implementation of the Europa device, a revolutionary new product manufactured by Maris Technology.

The Europa device provides a 'micro' solution to edge computing. With greater computational throughput with a fraction of the power consumption and heat generation than its closest rival, this device represents the future of edge computing.

Some of the key features of the Europa device include 4G connectivity, high-definition video on the edge, integration with Nx Witness VMS, running 4 channels of object detection concurrently. This technology is ideal for a wide range of applications, particularly edge-based computing within government, policing and autonomous vehicles.

Art of Logic and Maris Technology are excited to work together to bring this world first technology to market. We are confident that the Europa device will provide superior energy efficiency and a miniaturized form factor that will set a new standard for edge-based technology.
